ACTI-BOR U8

GENERAL DESCRIPTION:

Acti-Bor U8 is a high reactivity colemanite mineral product. Using the highest quality natural grade of hydrous sodium calcium borate it is specifically grinded to a fine particle size to increase the solubility and reactivity of the boron component. The fineness also meets stringent low residue requirements important in several specialty applications.

APPLICATIONS:

- ◆ Cross-linking agent in fracturing fluids
- ◆ High temperature flame retardant
- ◆ Anti-microbial
- ◆ Micronutrient in agriculture

PHYSICAL PROPERTIES:

- ◆ Appearance: off-white powder
- ◆ Specific gravity: 1.96
- ◆ Free Moisture: 1% (max)

HANDLING & STORAGE:

Acti-Bor U8 is a mineral which requires no specific handling and storage instructions.
